MACDRAFT

" My name is Alan J. Maki, owner of Beyond Basics Drafting & Design and I have been using MacDraft since 1985. Growing up in a family owned chain of Home Centers I have learned the building industry inside and out. I started my career doing marketing for our Home Centers and in 1990 I started my own Drafting & Design company. Since then I have been designing libraries that allow me to be more efficient in the design process. Thanks to my libraries and MacDraft I can produce an average of 160 home plans a year working a 10-15 hour week. "

## WHAT'S NEW IN **VERSION 6.0**

- A customizable toolbar with a large number of menu commands that can be accessed there, greatly increasing the speed of working and therefore the drawing efficiency.

- A new and improved Layers palette which has been redesigned to allow for easier manipulation of documents with multiple layers.

- A new drag and drop library palette/media browser which makes working with symbol libraries and images much easier than before. It also works with iPhoto for image dropping and images can also be dragged straight in from the desktop into your document.

- The addition of an Image menu containing many new controls for image manipulation, means images do not need to be pre-processed in other image editing applications saving enormous amounts of time. The new functions allow you to adjust the brightness contrast and RGB values, to blur or sharpen the image, to adjust levels, hue and saturation, apply Autofix and some simple filters.

- The improved Resize palette allows for the images to be changed by dpi, pixel size or unit size. The canvas can also be changed, and background colors assigned.

- Increased the maximum drawing size to over 14' 10" (4.5m) square, 10 times the area of the previous version of MacDraft Professional.

- Customizable scales to fill in any gaps in the default scales making the product much more flexible.
